PROFESSIONAL SUMMARY

Frontend Engineering Lead with 7+ years of experience building scalable, high-performance web applications using React.js and Next.js. Specialized in frontend system design, micro-frontend architecture (Module Federation), and performance optimization (Core Web Vitals). Now extending that foundation into product and AI-native engineering, piloting AI-assisted SDLC workflows in production, with a genuine, growing interest in deeper AI/ML systems over time.

TECHNICAL SKILLS

Frontend: React.js, JavaScript ES6+, TypeScript, Next.js (SSR/SSG/App Router), HTML5, CSS3, SASS, Tailwind CSS

State & Data: Redux, Redux Toolkit, Context API, React Query / TanStack Query

Testing: Jest, React Testing Library, Playwright (Unit / Integration / E2E, 80%+ coverage)

Architecture: Micro Frontends, Module Federation, Design Systems, Storybook, Component-Driven Dev, Monorepo

Perf & A11y: Code Splitting, Lazy Loading, List Virtualization, Core Web Vitals, WCAG 2.1 AA, ARIA

Product & AI-Native: AI-Assisted Development (GitHub Copilot, Claude), AI-Native SDLC Piloting, Product-Minded Architecture

Tooling: Webpack, Vite, GitHub Actions (CI/CD), Git, REST APIs, Application Security

PROFESSIONAL EXPERIENCE

Frontend Engineering Lead, Masters India 09/2026 – Present | Noida

- Drive frontend architecture decisions for the GST returns and GST reconciliation modules, defining component structure, state management, and data-handling patterns for high-volume, compliance-critical tax data.
- Lead a phased UI revamp of GST Reconciliation, modernizing the look and feel and building a reusable component system so new designs ship incrementally without disrupting live GST workflows.
- Pilot an AI-native SDLC approach across the team's workflow — integrating AI into code review, test generation, documentation, and ticket-to-code — and build AI-driven automation for repetitive dev tasks, with guardrails around review, testing, and security.
- Own frontend technical direction for 3 engineers, including code reviews, standards, and roadmap planning in collaboration with product, design, and backend teams.

Senior Software Engineer - Frontend, WiseTech Global 04/2024 – 05/2026 | Gurugram

- Led frontend system design and architecture for enterprise logistics platforms using React.js, Next.js, and micro-frontends (Module Federation)
- Built scalable and modular frontend systems supporting complex workflows and large datasets
- Optimized application performance by reducing load time by 40% and improving Core Web Vitals (LCP, CLS, INP) through code splitting, lazy loading, and list virtualization for 10,000+ records, while developing real-time dashboards for shipment tracking and contract management that improved user productivity by 25%.
- Established testing strategy (Jest, RTL, Playwright) achieving 80%+ coverage across critical modules
- Defined and enforced accessibility standards (WCAG 2.1 AA) across reusable component systems
- Mentored junior engineers, conducted code reviews, and improved team delivery velocity by ~30% using AI-assisted workflows

Senior Software Engineer - Frontend, Blume Global 05/2021 – 03/2024 | Bangalore

- Designed and implemented scalable frontend architecture for shipment visibility platforms used by enterprise customers
- Built and maintained a reusable design system (Storybook) to standardize UI development across teams
- Optimized data fetching and caching using React Query, reducing UI defects and improving reliability
- Improved performance using lazy loading and efficient state management (Redux Toolkit)
- Collaborated cross-functionally with product, backend, and design teams in Agile environments

Project Engineer - Frontend, Wipro Limited 06/2019 – 05/2021 | Noida

- Migrated legacy frontend applications to React.js, improving maintainability, scalability, and developer productivity.
- Collaborated with backend teams to integrate REST APIs and improve frontend data flow across applications.

KEY PROJECTS

Shipment Tracking Dashboard
Real-time shipment tracking UI with React.js, Next.js SSR, and REST APIs. Scalable, accessible components with Core Web Vitals compliance.

Contract Rate Management System
Scalable contract lifecycle UI with React.js, Redux Toolkit, and Storybook component library — reduced QA cycle time by 20%.

EDUCATION

B.Tech, Madan Mohan Malaviya University of Technology 2015 – 2019
